

NONA REPAIR

INFUSION REPAIR KIT

BENEFITS

Fast. Everything you need to perform a complete composite repair, from raw materials to tools, is included in the kit. Setup and repair are quick, and high quality repairs can be performed in just a few hours.

Permanent. The use of infusion technology allows for a better bond and higher quality repair compared to wet layup. The use of a vacuum bag also protects the repair area from foreign debris.

No Mess. The resin is already measured and ready to mix. Resin stays contained in the sealed pouch and repair zone during cure.
